The Cabin Crew Interview Made Easy OECD Publishing
The Airline industry has been under increasing pressure recently,
from the increased competition of low-cost airlines and the
terrorist events of 2001 to name but a few. Various US airlines,
including Delta and Northwest, have been declared bankrupt, oil
prices have soared, and seat prices are still being forced down,
the supply far outweighing the demand. This e-book looks at
recent case studies of airlines in crisis (Continental Airlines), and
also airlines which have excelled at expansion during this
turbulent time such as Easyjet and Ryanair, and offers examples
of successful strategies previously used. The collection also
features interviews with high-profile figures from airlines such as
Go!, Qatar Airways and SWISS International Airlines.

Challenges and Opportunities Springer

This book examines the challenges facing the development of tourism in the six member states of the Gulf Cooperation Council (GCC): Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates (UAE). This region, which largely comprises

the Arabian Peninsula, possesses some of the fastest growing economies in the world and is remarkably unique. It shares similar associations and affinities: tribal histories, royal kinship, political associations, Bedu cultural roots, Islamic heritage, rapid urbanization, oil wealth, rentier dynamics, state capitalist structures, migrant labour, economic diversification policies and institutional restructuring. Therefore, this volume takes the study of tourism away from its normative unit of analysis, where tourism in the region is being examined within the context of the Middle East and the wider Islamic and Arab world, towards an enquiry focusing on a specific geo-political territory and socially defined region. Although international tourism development in the region embodies a range of challenges, complexities and conflicts, which are deeply contextualized in this volume, the approach overall does not endorse the normative 'Gulf bashing' position that has predominated within the critical enquiries in the region. It presents a forward-looking and realistic assessment of international tourism development, examining development potentialities and constructive ways forward for GCC states and the region as a whole. This edited volume provides a real attempt to examine critically ways in which tourism and its development intersect with the socio-cultural, economic, political, environmental and industrial change that is taking place in the region. By doing so, the book provides a theoretically engaged analysis of the social transformations and discourses that shape our contemporary understanding of tourism development within the GCC region. Moreover, it deciphers tourism development's role within the context of the GCC states undergoing rapid transformation, urbanization, ultra-modernization, internationalization and globalization. In addition to state-specific illustrations and destination case studies, the work provides insights into relatable themes associated with international tourism development in the region, such as tourism's relationship with religion, heritage and identity, the environment and sustainability, mobility and cross-border movements, the transport industry, image production and destination branding, mega-development and political stability and instability. The book combines theory with diverse case study illustrations, drawing on disciplinary knowledge from such fields as sociology, political economy and social geography. This timely and original contribution is essential reading for students, researchers and academics in the field of tourism studies and related subject areas, along with those who have regional interests in Middle East studies, including Gulf and Arabian Peninsula studies. **India Today** Aspire Press

A Pilot's Memoir Marshall Cavendish International Asia Pte Ltd Airline Operations and Management: A Management Textbook is a survey of the airline industry, mostly from a managerial perspective. It integrates and applies the fundamentals of several management disciplines, particularly economics, operations, marketing and finance, in developing the overview of the industry. The focus is on tactical, rather than strategic, management that is specialized or unique to the airline industry. The primary audiences for this textbook are both senior and graduate students of airline management, but it should also be useful to entry and junior level airline managers and professionals seeking to expand their knowledge of the industry beyond their own functional area.

A Management Textbook World Scientific Publishing Company Applied ethics has been gaining wide attention in a variety of curriculums, and there is growing awareness of the need for ethical training in general. Well-publicized ethical problems such as the Challenger disaster, the Ford Pinto case and the collapse of corporations such as Enron have highlighted the need to rethink the role of ethics in the workplace. The concept of applied ethics originated in medicine with a groundbreaking book published in 1979. Business ethics books began to appear in the 1980s, with engineering ethics following in the 1990s. This volume now opens up a new area of applied ethics, comprehensively addressing the ethical issues confronting the civil aviation industry. Aviation is unique in two major ways: firstly it has a long history of government regulations, and secondly its primary focus is the safety of its passengers and crew. For decades commercial aviation was viewed in the same manner as public utilities, and thus it was highly regulated by the government. Since the Deregulation Act of 1978, aviation has been viewed as any other business while other experts continue to believe that the sudden switch to deregulation has caused problems, especially since many airlines were unprepared for the change. Ethical Issues in Aviation focuses on current concerns and trends, to reflect the changes that have occurred in this deregulated era. The book provides the reader with an overview of the major themes in civil aviation ethics. It begins with theoretical frameworks, followed by sections on the business side of aviation, employee responsibility, diversity in aviation, ground issues regarding airports, air traffic control and security, as well as health and the environment. The contributors to the volume include both academics doing research in the field as well as professionals who provide accounts of the ethical situations that arise in the workplace.
