Engineering CRISPR gene
editing is a genetic
engineering technique in
molecular biology by
which the genomes of
living organisms may be
modified. It is based on a
simplified version of the
bacterial CRISPR-Cas9
antiviral defense system.
By delivering the Cas9
nuclease complexed with
a synthetic guide RNA
(gRNA) into a cell, the
cell's genome can be cut
at a desired location,
allowing existing genes to
be ... CRISPR gene editing
