Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1954 "O'Reilly Media, Inc."

The first reconnaissance of all the major planets of the Solar System culminated in the Voyager 2 encounter with Neptune in August 1989. Neptune itself was revealed as a planet with gigantic active storms in its atmosphere, and off-center magnetic field, and a system of tenuous, lumpy rings. Whereas only two satellites were known prior to the encounter, Voyager discovered six more. Triton, the largest satellite, was revealed as a frozen, icy world with clouds and layers of haze, and with vertical plumes of particles reaching five miles into the thin atmosphere. This latest Space Science Series volume presents the current level of understanding of Neptune, its rings, and its satellites, derived from the data received from the Voyager. The book's chapters are written by the world's leading authorities on various aspects of the Neptune system and are based on papers presented at an international conference held in January 1992. Covering details of

Neptune's interior, atmosphere, rings, magnetic fields, and near-space environment--as well as the small satellites and the remarkable moon Triton--this volume is a unique resource for planetary scientists and astronomers requiring a comprehensive analysis of Neptune viewed in the context of our knowledge of the other giant planets. Until another spacecraft is sent to Neptune, Neptune and Triton will stand as the basic reference on the planet.

When the nuclear-powered submarine USS Triton was commissioned in November 1959, its commanding officer, Captain Edward L. Beach, planned a routine shakedown cruise in the North Atlantic. Two weeks before the scheduled cruise, however, Beach was summoned to Washington and told of the immediate necessity to prove the reliability of the Rickover-conceived submarine. His new secret orders were to take the Triton around the world, entirely submerged the total distance. This is Beach's gripping firsthand account of what went on during the 36,000 nautical-mile voyage whose record for speed and endurance still stands today. It brings to life the many tense events in the historic journey: the malfunction of the essential fathometer that indicated the location of undersea mountains and shallow waters, the sudden agonizing illness of a senior petty officer, and the serious problems with the ship's main hydraulic oil system. Intensely dramatic, Beach's chronicle also describes the psychological stresses of the journey and some touching moments shared by the crew. A skillful story teller, he recounts the experience in such detail that readers feel they have been along for the ride of a lifetime.

Emma has just learned that her mother is a long-lost Poseidon princess, and now struggles with an identity crisis: As a Half-Breed, she's a freak in the human world and an abomination in the Syrena realm. Syrena law states all Half-Breeds should be put to death. As if that's not bad enough, her mother's reappearance in the Syrena world turns the two kingdoms—Poseidon and Triton—against one another. Which leaves Emma with a decision to make: Should she comply with Galen's request to keep herself safe and just hope for the best? Or should she risk it all and reveal herself—and her Gift—to save a people she's never known? Once again, Anna Banks infuses Emma and Galen's points of view with humor, intrigue, and waves of romance.
